PHP-Nuke 7.7/7.8 IMO by Bob Marion

2005-06-04 05:03:02 by Raven

Bob Marion writes *"I've already loaded and began testing 7.8 . So far I've fixed sql file errors, along with the one Raven fixed, removed the old banners admin files to allow the new banners admin files to function, corrected the new banners admin to allow super admins to assign other admin editing rights.*

This is just the start folks, so for heavens sakes avoid 7.7/7.8 until ChatServ, Raven, myself and other old timers have time to fix this s*** before you sink your site. The new release every month or two is to serve only one purpose, to line mr. burzi's pockets with your cash while you get a piece of s*** that can be broken just by uploading it.
