

New Support Site for Mighty_Y's Scripts

2005-06-07 16:43:22 by Mighty_Y

Alot has changed since anor and me left portedmods.com , so I have to give some more info on what happened.

First off all, me and the new owner of portedmods.com don't really get along (long story, don't ask) and he forces me to stay of his site or he'll send his lawyers. Too bad this also means I cannot support ForumNews Advance anymore at portedmods.com so I decided to create a Temporary Support Site, <http://support.code-area51.com>, untill my new site is finished.

Read more for a detailed description...At the site, <http://support.code-area51.com>, , I will give support on FNA, SDS (Style Demo System) and TMS (Tutorials Module System) and you can find the latest releases there as well. All copyright lines are changed, all files include a detailed readme and a license file, please take notice of this.

No support will be giving by me other then on <http://support.code-area51.com>, , so please change the word to your fellow admins, it would be a shame if they cannot a place to get decent support for my releases.

I really want to apologize about the fact that I cannot redirect everyone from portedmods.com to code-area51.com but it's not my fault at all.

Mighty_Y

PS In the next few days you can also find an updated fully working Attachment Mod version for phpNuke, the one at portedmods.com is outdated and has serieus security issues.
