

## NukeSentinel[tm] Patch Released For All Versions

2006-01-10 09:12:32 by Raven

It has come to my attention (thanks Foggy) that the CGI Auth routines were not always honoring the NukeSentinel(tm) admin username. Depending on how the .staccess file was created, NukeSentinel(tm) was mistakenly using the nuke\_authors table aid column. As a result, you could never get a match for security.

To correct this, you need to modify 1 line in 2 different files.

Please refer to [FIX: NukeSentinel\(tm\) 2.4.x and probably all prior versions](#) for the details and the fix. It will be corrected in the next release.

**This will be referred to as v2.4.2pl3**

Download the [NukeSentinel™ v2.4.2pl3 Upgrade Patch](#)
