

## Nuke Tweaks

2006-01-28 20:06:21 by phoenix-cms

since phpnuke 7.7 phpnuke has included a tinymce editor, there has been rumors that this is a security issue, this may be true, many people do disable the editor, many people use the editor and many are concerned. now the team over at dadanuke bring you bbcode versions of nuke modules where usually you find tinymce editor. the tinymce editor code is still included and filters also bbcode can now be used using phpnuke built in switch so bbcode or tinymce can be used. its your site let you decided whats best for your users. let us know your thoughts on this module pop us a message via our forums and download here many thanks dada development Team. From Raven: Just for clarification, those are NOT rumors. It's provable fact.
