PhpNukeMailer 1.0.5: with PHPMailer, so it supports SMTP, SMTP Auth, Sendmail...

2006-03-01 22:24:17 by nukeevangelist

 The new PHPNuke-Mailer - now version 1.0.5 was made public: <u>download your copy here</u> from one of the global mirrors.

brandnew: PhpNukeMailer 1.0.5: with PHPMailer, so it supports SMTP, SMTP Auth, Sendmail, Qmail, and mail() methods.
Very good news for all PHPNukers: slaytanic_wehrmacht writes "PhpNukeMailer v1.0.5: We're almost there. All known bugs are now corrected and as usual more security enhancements. Those who haven't meet it yet, let me put PhpNukeMailer in some kind of perspective for you: PhpNukeMailer is an addon for PHP-Nuke that will let you send mails with a different method than the default mail() function, works with PHPMailer, so it supports SMTP, SMTP Auth, Sendmail, Qmail, and mail() methods.

<u>download your copy here</u> :: more infos in the actual release articles on phpnuke.org or nukecops.com
