Categorical Hierarchy Model of Dynamic Navigation Drop-down Menu

2006-05-22 01:14:47 by ToolBox

To provide php-nuke site users with the highest effective tree-style drop-down menus in a navigation, NukeKorea Dev. Network has been observing how php-nuke site users would access their hot contents. Needless to say, that was navigation menu that is still static. Most php-nuke sites uses static navigation on the top. We concluded and implemented that the navigation menus have to achieve the followings to make your php-nuke based sites be professional

- Easy accessible and editable to administrators
- Theme independent modules and controls
- Dynamic tree-style dropdown styles
- Tree-style categorical hierarchy model
- Separators to classify dropping-down sub-menus>
- Unlimited tree depth of sub-menus
- Supports of multi-linguals
