

Arcade v 3.0.2b ported for PHP-Nuke 8.0!

2007-01-12 09:47:38 by forgotz

Arcade v 3.0.2b ported for PHP-Nuke 8.0, adds an arcade to your BBtoNuke forums. Provides a very nice PHP-Nuke like module facility. Offering more exposure as well as allowing guests to preview games without registering first. All games tested on multiple platforms and distinguished by higher quality flash. This allows for a foundation to grow your flash game collection. You may preview [here](#). Download [here](#) (club membership required).

- *Updated SQL file for smoother installation and integration*
- *Made all changes required for PHP-Nuke 8.0 compliance*
- *Rewrote most all game descriptions*
- *Updated most game thumbnails*
- *Integrated Arcade Games Nuke 6.5+ Module (updated for 8.0)*
- *Pre bundled with fourteen tested games, for quality and functionality*
- *Improved install text*
- *Many other improvements as well as little annoyances fixed*

Rewrote also much of the game descriptions to represent something closer to English. Changed documentation, not only to reflect the changes made by us, but also an improvement upon original(s). Spent time also researching (Googling) any other bugs or inherent flaws. We have established a bug fix forum [here](#), so that we may resolve any further issues, quickly and efficiently. Thanks!
