

## PHP Multiple Vulnerabilities

2009-02-28 02:29:38 by Raven

SECUNIA ADVISORY ID: SA34081

VERIFY ADVISORY: <http://secunia.com/advisories/34081/>

DESCRIPTION: Some vulnerabilities have been reported in PHP, where some have an unknown impact and others can potentially be exploited by malicious people to disclose sensitive information or cause a DoS (Denial of Service).

- 1) An error within the "imagerotate()" function can be exploited to read arbitrary memory.
- 2) An unspecified error in the zip functionality can be exploited to cause a crash when file or directory entry names contain a relative path.
- 3) A vulnerability is caused due to an unspecified error within the "explode()" function. No further information is currently available.
- 4) An unspecified error exists when processing malformed strings passed to "json\_decode()". No further information is currently available.

SOLUTION: Update to version 5.2.9 - <http://www.php.net/downloads.php>

PROVIDED AND/OR DISCOVERED BY:

- 1) The vendor credits Hamid Ebadi, APA Laboratory.
- 2 - 4) Reported by the vendor.
