

## Security Alert: Malicious Facebook Password Spam

2009-10-27 03:41:48 by Raven

Websense® Security Labs(TM) ThreatSeeker(TM) Network has discovered a new wave of malicious email attacks claiming to be a password reset confirmation from Facebook. The From: address on the messages is spoofed using support@facebook.com to make the messages believable to recipients. The messages contain a .zip file attachment with an .exe file inside. The .exe file currently has a detection rate of about 30 percent on [VirusTotal](#) Our ThreatSeeker?Network has seen up to 90,000 of these messages sent out so far today. To view the details of this alert [Click here](#)
