

PHP-Nuke Cross-Site Scripting Vulnerabilities

2005-02-16 12:57:45 by crypto

There have been reported two vulnerabilities in PHP-Nuke, which can be exploited by malicious people to conduct cross-site scripting attacks. The vulnerabilities have been reported in version 6.x through 7.6. Other versions may also be affected.

Some input isn't properly sanitised before being returned to the user. This can be exploited to execute arbitrary HTML and script code in a user's browser session in context of a vulnerable site. More information:
