Nuke (v6.5) News Module Mod - Prioritize/Order Your Articles!

2003-04-25 20:26:16 by gcf

This modification/hack allows you to promote/order one news article above another. The default behavior of the Nuke News module is to always put the most recent news item at the top of the chain. With this modification you can alter that behavior. Get it in the download area - free download. It is still considered experimental, but I have tested it pretty thoroughly. Download it here. Please post all bug reports here. Do not post bug reports in the comments of this article. I will not respond to them - sorry.

[UPDATED 4/29/2003] have replaced the download with a modified nuke/html/admin/modules/stories.php file. That is the only file that has changed. If you downloaded before 18:25 hours on 4/29/2003, please redownload and you should be able to restore the default NULL values now.
