

## Why You Should NOT Use PHP-Nuke Versions 7.7 or 7.8 Explained

2005-06-28 08:16:28 by 64bitguy

In an effort to help Nuke users understand important issues regarding Nuke Versions 7.7 and 7.8, I have written an article that explains [Why You Should NOT Use PHP-Nuke Versions 7.7 or 7.8](#)

This article covers some of the technical and physical reasons why these two versions of Nuke mark a horrible step backwards in design evolution while demonstrating examples of vulnerabilities and lost features. I urge users that might have already employed Nuke 7.7 or 7.8 (or those considering it) to read this information so that they may make an informed decision and understand the major problems with these two latest versions. **(From Raven)** This is a very well written article and is a **MUST** read for all contemplating using phpnuke v7.7 or v7.8 and **especially** for those who already are using it.
