

PHP-Nuke AutoLogout v1.2 Add-On/Tweak released

2005-08-09 03:14:31 by nukeevangelist

PHP-Nuke AutoLogout v1.2 Add-On/Tweak released :: <http://www.ec-clan.org/downloads.html>

the new [new article: PHP-Nuke AutoLogout v1.2 Add-On/Tweak release \(article\)](#)

e2house writes "This Add-On/Tweak will allow you to be succesfully empowered with auto-logout feature with your PHP-Nuke portal - in an effecient, but user friendly way. There are two main features included, which were considered beneficial to implement: TIMEFRAME based auto-logout [single line configurable], BROWSER status based auto-logout [single line modification]...

TIMEFRAME based auto-logout [user cookie detection applied]

- Unregistered users uneffected, admins uneffected
- Detected registered users EFFECTED [auto-logout due to elapsed inactivity timeframe]
- users can visually follow the amout of time left prior to system initiated auto-logout (java-script message window in the browser bottom status bar)

As the end-user refreshes the page (or moves to another page), the counter being responsible of performing the *logout_by_system* function call/triggering, will get reset to it's initial start value (say, 3600 seconds or whatever is set as a system initiated auto-logout trigger value)

::: BROWSER auto-logout main features :::

- user automatically logged out, as the used browser window gets closed.

More detailed explanation & installation guides can be found enclosed in the package.

The Add-On/Tweak is available as a GPL/GNU based package to further use/copy/distrubution.

Package can be downloaded from from downloads section at site:
