ThemeFix for UN 4.1, 4.2 and PHP-Nuke

2005-12-07 23:29:07 by drakeman

I've prepared a simple and useful script for you, that will get you rid of problems with bad installed themes.If you set a bad default theme for your page, whole page will not work and error messages will be displayed. In this case, this script sets the default theme of installed system a makes it fully functional with this theme, which can be changed in administration section.

It's for:

United-Nuke 4.1 series

United-Nuke 4.2 series

PHP-Nuke 6.5 and up
