

PHP-Nuke 7.9 - Now with BBtoNuke 2.0.20 and TinyMCE 2.0.5.1!

2006-04-14 12:06:38 by forgotz

Visit <http://dadanuke.org> for download and screen shots (registration required). PHP-NUKE: Advanced Content Management System. A CMS empowers individuals at all levels, to express themselves and their message, whether it be community, retail or service. PHP-Nuke allows the webmaster and/or site editor, options, feedback and statistics. Unlike plain, "static" HTML, PHP-Nuke is dynamic and ever changing. This is possible because of database technology. Your PHP-Nuke database, collects and displays information, giving you and the end-user a much gratifying experience.

This release is PHP-Nuke 7.9, with Patched Series 3.2 (most current fixes as of date of this article) and BBtoNuke 2.0.20 and TinyMCE 2.0.5.1 applied. This bundle is fast and very nimble! Post patched series core file edits and modifications include:

- Upgraded BBtoNuke to version 2.0.20
- Upgraded TinyMCE to version 2.0.5.1
- Removed phpnuke.gif (unused, redundancy) from images/powered directory
- Removed block-Login.php from blocks directory (redundancy)
- Fixed \$sitename variable not parsing in Newsletter footer
- Corrected English syntax admin language files
- Removed block-Sample_Block.php from blocks directory
- Removed readme.txt from blocks directory (block-Sample_Block.php)
- Created /upgrades/0.2x/ directory for BBtoNuke upgrade scripts
- Added upgrade19-20.php to 0.2x directory

Language packs will be made available for download. New language packs are always welcome, as usually they are much more complete than the stock PHP-Nuke language files. All legacy files have been removed, best as possible. Default block layout changed as well as default module(s) activate/deactivate.
