

nukeSEO.com releases nukePIE™ - replacement feed reader for PHP-Nuke block

2007-12-30 19:20:16 by kguske

[nukeSEO.com](#) released nukePIE™, a replacement for the standard PHPNuke block feed reader.

With nukePIE™, **RavenNuke**, BonusNuke, DadaNuke, NukeEvolution, Nuke Platinum and other **PHP-Nuke** distributions can:

- * Correctly display **RSS 2.0, ATOM 1.0, or any properly-formed feed in Nuke blocks**
- * Display feed item descriptions as either **full-HTML tool tips** or as title tags for the link, which helps visitors and search engines

Links: [nukePIE demo](#), [download](#) (GPL, free membership required). [FAQs](#). nukePIE™ performs the opposite function of nukeFEED™: nukeFEED™ **generates** feeds from PHP-Nuke content, and nukePIE™ **consumes** (or reads) feeds from any source. nukePIE™ uses the [SimplePie](#) class and [BoxOver](#) script.

Since nukePIE™ replaces core PHP-Nuke functions, it **requires modifications** PHP scripts (namely, mainfile.php). nukePIE™ will be included in the next release of RavenNuke™.

nukePIE™ in action:

The screenshot shows a news article on a PHP-Nuke website. The article is titled "Introducing nukePIE(tm)" and is dated December 30, 2007. The content describes nukePIE™ as a replacement for the standard PHPNuke block feed reader. It lists features such as correctly displaying RSS 2.0, ATOM 1.0, or any properly-formed feed in Nuke blocks, and displaying feed item descriptions as either full-HTML tool tips or as title tags for the link. The article also includes links to the nukePIE demo, download, FAQs, and social media links like Email this, Digg This!, Add to del.icio.us, and Technorati Links. A sidebar on the right shows a "nukeSEO.com News" section with a link to "Introducing nukePIE(tm)". Below the main article, there is a section for "nukeFEED 1.1.0 released with improvements and fixes" with a "read more..." link.
