

shack 1.0.0 has been released.

2004-09-25 10:33:07 by genoxide

We have released the first version of our image hosting module for ProjectXERO, shack. This module allows your visitors to host image files on your server. You can set the maximum size of the image file, set the file path you want the files to be saved, set if anonymous can upload or not and handle images within your admin panel. You can get this module from our website at ProjectXERO.org.
