

## NukeSentinel™ 2.2.0 Under Construction

2005-02-15 07:45:09 by BobMarion

I have setup a demo/test site for [NukeSentinel™ 2.2.0](#) which is currently under construction. This version has the IP2Country included in hte main package but not installed unless you "Import" the data. This version will also allow you to import entire coutries into the "Blocked Ranges" database. There are several admin functions to be refined/expanded as of yet, however you can get a really good feel for the new version.
